

Weather Warning Guidance

String Lights Outdoor Product Maintenance for harsh weather conditions

We hope you are all well and are enjoying your outdoor shading systems. As our systems have direct exposure to the outdoors, we are aware the natural surroundings and weather conditions may affect our systems.

That is why we kindly inform you to check out this maintenance guide for looking after your shading system, and to keep it safe during extreme weather conditions.

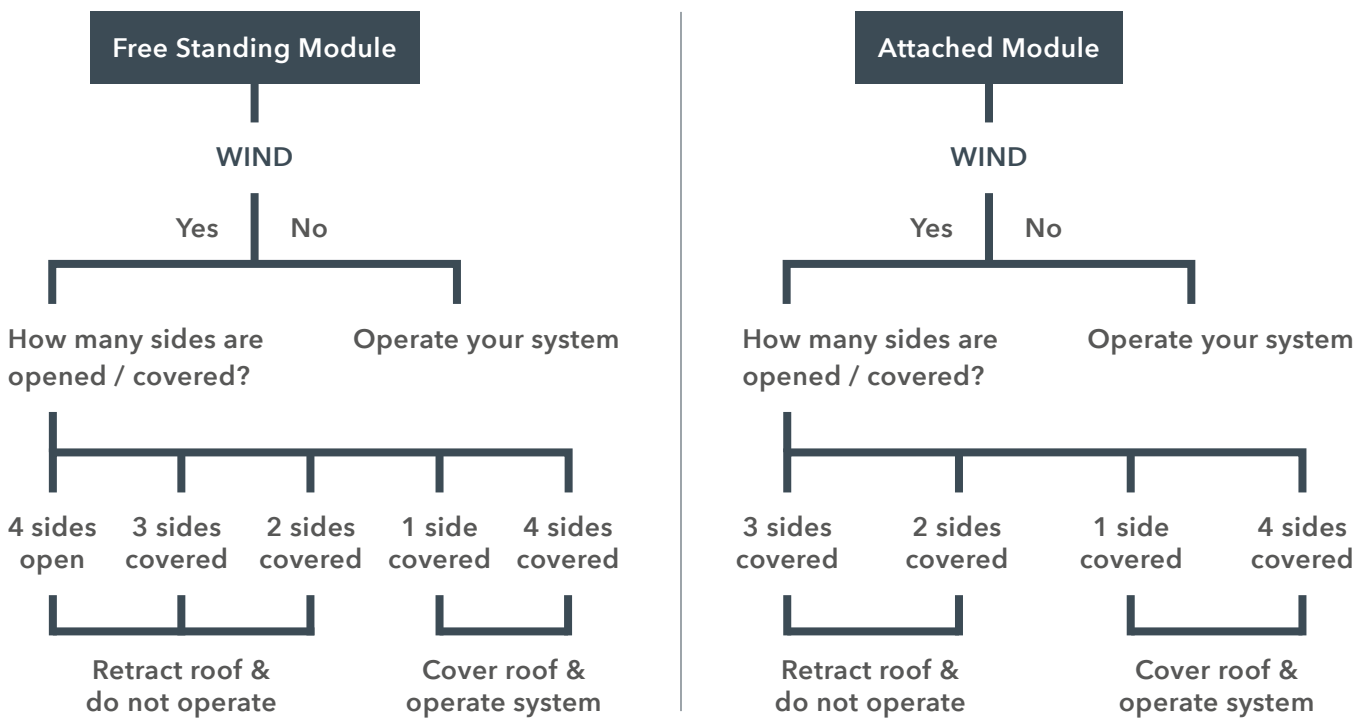

For keeping your shading systems safe during these extreme weather conditions, we advise the following:

Awning Systems

Awnings should be retracted on windy days to keep the system safe from the risk of any damage. Do not operate our awning system in extremely windy weather. It should stay retracted - please note that if you live in a particularly windy area, we always advise to purchase one of our Somfy wind vibration sensors to protect your awning further.

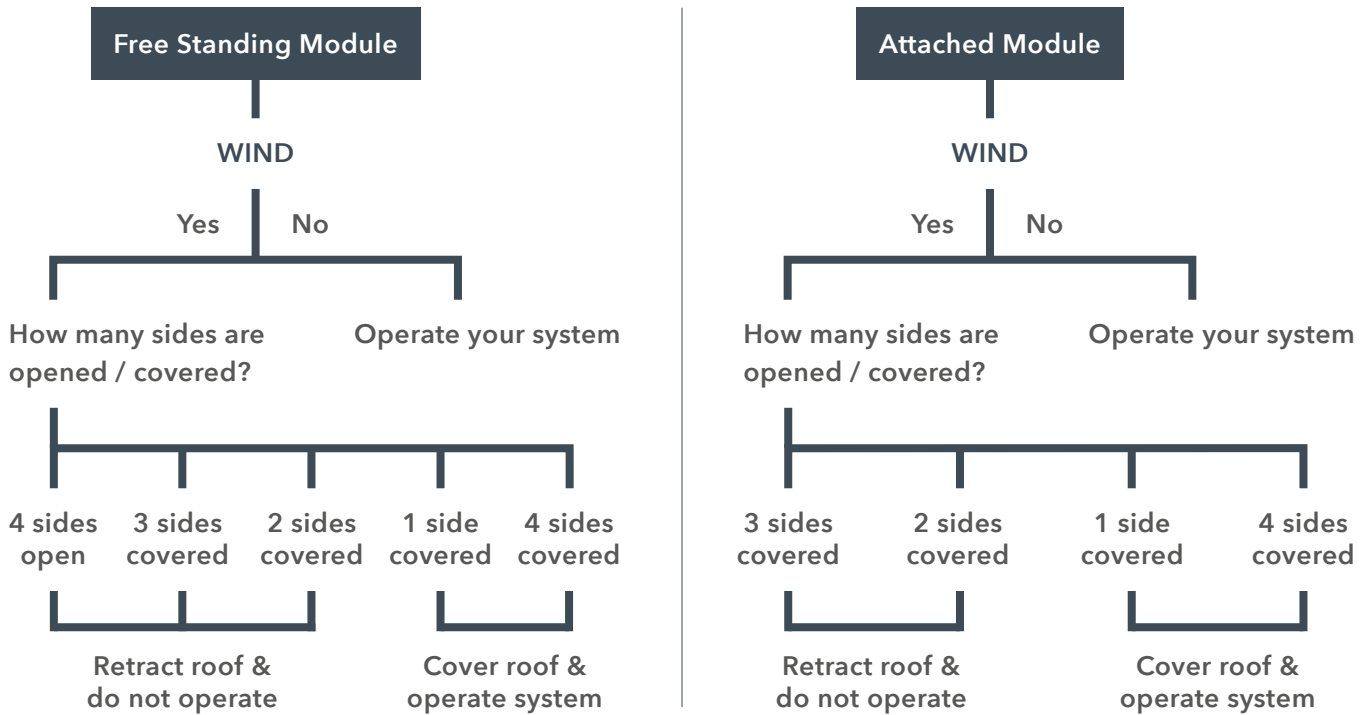

Retractable Pergolas | Free Standing Module & Attached Modules

Retractable Pergola	4 sides open	3 sides covered	2 sides covered	1 side covered	4 sides covered
Free Standing Module	Retract roof & do not operate	Retract roof & do not operate	Retract roof & do not operate	Cover roof & operate system	Cover roof & operate system
